

CRASH CUSHION

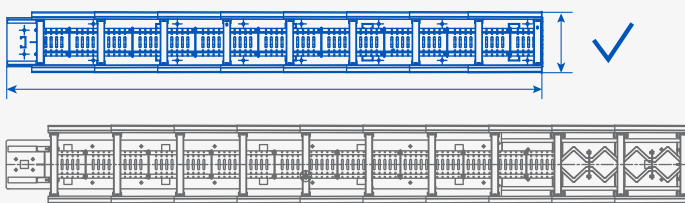

The most compact and energy-intensive crash cushion. Prevents severe consequences of an accident collision of vehicles with various engineering structures on the road.

The patented attenuating system within the structure effectively absorbs impact energy and reduces injuries.

MODEL RANGE

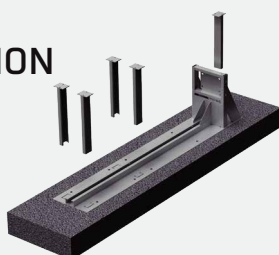

MINIMAL DIMENSIONS

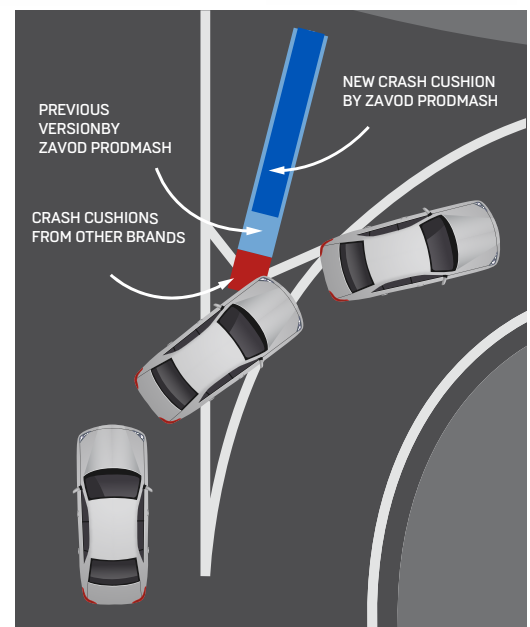

INSTALLATION

- Asphalt / Soil
- Concrete

Up to 25% higher energy absorption capacity at the same collision speed class

CRASH CUSHION

ADVANTAGES

- Minimal dimensions in length and width, among the range of crash cushions, which makes the design as safe as possible.
- Standard elements and joints with the installation time not more than 2 hours, when installed by a contractor having all necessary skills to install traffic guardrails.
- Patented.
- Detailed assembly instructions.
- High maintainability.
- Competitive design.

TESTED AND CERTIFIED

- Efficiency and safety of the design has been proven by field and virtual tests.
- Certified for compliance with the Customs Union Technical Regulations CU TR 014/2011 Road Safety.
